

HANDHELD DRY-WELLS

your device. The 9100 HDRC has a display resolution of 0.1 degrees, an accuracy of $\pm 0.5^{\circ}\text{C}$, a stability of $\pm 0.1^{\circ}\text{C}$, and a stabilization time of five minutes.

Model HT9102 Dry-Well

For work in the temperature range of -10°C to 122°C , Hart's Model 9102 dry-well is another first in the industry.

This dry-well is only 3.25 inches high and 6 inches wide, achieves temperatures as low as -10°C , includes a NIST-traceable calibration, and is accurate to $\pm 0.5^{\circ}\text{C}$. The Model 9102 is excellent for dial gauges, digital thermometers, bulb switches, and other sensors that need calibration below ambient. It's perfect for ISO 9000 quality programs because its calibration is NIST traceable.

It has two wells so you can use one for a reference thermometer to increase accuracy. Both wells are 1/2 inch in diameter, and each has inserts available for almost any sensor size. The 9102 also has a battery pack option that gives you approximately four hours of field use when AC power is unavailable.

Models HT9100 and HT9102

Smallest dry-wells in the world

Fast and easy thermometer checks

Accuracy to $\pm 0.5^{\circ}\text{C}$

RS-232 interface with Hart software (Model 9930)

Hart's line of portable dry-wells is incredible. They're the smallest, lightest, and most portable dry-wells in the world. The Model 9100 weighs only 2 pounds 3 ounces (1 kilogram).

Model HT9100 Dry-Well

Since we introduced the world's first truly handheld dry-well, many have tried to duplicate it—in vain. Despite its small size (2 1/4 inches high and 5 inches wide) and light weight, the 9100 outperforms any dry-well in its class in the world.

It's simple and convenient too. Anyone can learn to use one in less than 15 minutes. It has a range to 375°C (707°F) and is perfect for checking RTDs, thermocouples, and small bimetal thermometers in the field.

Plug it in, switch it on, set the temperature with the front-panel buttons, and insert your probe into the properly sized well. Compare the reading of your device to the display temperature or to an external reference, and the difference is the error in

Take the HT9100 anywhere. It's the smallest dry-well in the world.
